Office Phone Number: None — email preferred

Student Consultation Hours

By appointment.

Course Description

Credit Hours: 3.00. Applied problem-solving course developing AI-augmented finance competency. Students tackle real corporate finance and investment challenges using current market data and AI tools. The DRIVER framework provides systematic methodology for AI collaboration while maintaining financial judgment. Three major projects build portfolio-ready applications across finance domains.

Prerequisites: Undergraduate level, MGMT 31000, Minimum Grade of C- and Undergraduate level, MGMT 41100, Minimum Grade of D-

Course Learning Outcomes

By the end of the course, you will be able to:

1. Apply the DRIVER framework systematically to solve complex finance problems with AI collaboration.
2. Orchestrate AI tools effectively for financial data analysis, modeling, forecasting, and decision support.
3. Validate AI-generated outputs using financial domain knowledge, business judgment, and sanity testing.
4. Build practical financial applications that solve classes of problems using current market data.
5. Integrate corporate finance and investment concepts in comprehensive analytical solutions.
6. Communicate solutions professionally through structured video presentations and documentation.

In addition to the University learning outcomes above, this course develops two further capabilities:

Outcome 7 — Exercise professional judgment in determining appropriate AI use, maintaining human centrality in financial decisions.

Outcome 8 — Analyze real-time financial data to make evidence-based recommendations on current business situations.

Teaching Philosophy

AI makes answers cheap; it does not make understanding, judgment, or growth automatic. The scarce work shifts to choosing questions worth answering, deciding what to trust and do, and developing the capacity to own the consequences. My role is not to hand you finished answers or complete code. I design problems, tools, and feedback loops that let you build, test, fail, explain, and improve. That is why this course emphasizes the D stage of DRIVER: discover and define the right problem before AI accelerates the wrong one. We build to learn—not learn merely to build. The goal is not to outperform AI. It is to use AI as a studio for developing your own understanding, judgment, and capacity to act.

Growth and wisdom matter deeply, but I do not grade them as personality traits or ask you to perform transformation. I grade visible acts of judgment: asking better questions, surfacing assumptions, calibrating confidence to evidence, testing independently, revising after failure, naming limitations, and transferring what you learned to a new problem. You are not penalized for where you begin or rewarded for merely claiming growth.

How to Succeed in this Course

Start with D: discover and define. Before you build, write down the problem, who it is for, what you know, what you need to learn, the real constraints, and what success looks like. A polished solution to the wrong problem is still failure.

Use the best available AI models and harnesses—but do not confuse capability with reliability. Working at the frontier reveals both AI's capacity and its shortcomings. Treat every output as an experiment: prompt, run, inspect, challenge, revise, and document. Test it against known answers, reasonable ranges, edge cases, and a second independent model. Practice through many small cycles; failure is data. Never submit work you cannot explain. Success is turning an AI-produced result into your own defensible financial judgment.

Build locally from the beginning. Use AI to help you plan, write, debug, and test code, but you must be able to run that code on your own computer, inspect errors, install dependencies, manage a multi-file project, and turn analysis into a working web application. Use GitHub as the durable home for your code and development history, not as a last-minute upload site. Google Colab is an alternative for notebook-based work; it is not a substitute for the required local environment or for testing a web application locally.

Learning Resources, Technology & Texts

REQUIRED: OpenAI ChatGPT Plus subscription — must include Codex access

REQUIRED: Google AI Pro subscription — must include Gemini Pro models

REQUIRED: GitHub Repo

REQUIRED: SubStack Account

REQUIRED: Financial data and api

Both AI platforms are required for the full semester. This course is built around working across two independent AI systems: you will use each to cross-examine the other, which is central to the validation skill this course teaches and to how your projects are assessed.

Subscribe to the correct tier. Free accounts on either platform will not carry you through this course. Before the first lab, sign in to each platform and confirm you can reach Codex on OpenAI and Gemini Pro models on Google. If you cannot, you are on the wrong tier; fix it before the first assignment is due, not after. Subscription tier names change periodically; what matters is access to the two capabilities named above. You may use additional AI tools at your own discretion — only these two are required, and all AI use must be disclosed in your submissions.

Reference materials, DRIVER framework guides, templates, problem statements, and data sources are provided through Brightspace. Optional reference texts are available in the DRIVER series at cinderzhang.github.io.

Computing and coding environment: a personal laptop and a working local development environment are required for every class session. Before the first lab, install a supported version of Python 3, a package manager, a code editor or AI coding harness, Git, and a modern web browser, and create a GitHub account. You must be able—with AI assistance—to create and run Python scripts, install packages in an isolated environment, work with multi-file projects, use Git version control, push changes to GitHub, and launch a local web application. Google Colab (free, cloud-based Python) is an acceptable alternative for notebook-based analysis or temporary troubleshooting, but it does not replace the local environment required for web-application projects. A reliable internet connection is required for data access, AI tools, and project development.

Video recording: screen recording with webcam and clear audio, at 720p or better. Kaltura Capture is available at no cost through Purdue; Zoom recording or other tools are

acceptable.

Data sources: Include but not limited to SEC EDGAR company filings and API, market data APIs, and economic indicators from FRED, the Bureau of Labor Statistics, and the Census Bureau.

Brightspace learning management system (LMS)

Access the course via Purdue's Brightspace learning management system. It is strongly suggested that you explore and become familiar not only with the site navigation, but also with the content and resources available for this course. See the Student Services widget in Brightspace for Technology Resources, Academic Resources, Campus Resources, and Health and Well-Being Resources.

Assignments

Total: 1,400 points. Both sections follow identical assignments and deadlines.

In-class labs (best 8 Tuesday + best 8 Thursday, at 25 points each) – 400 points – in class, Aug 25–Nov 17, excluding studio weeks.

Project 1 – Finance Application – 300 points – due Monday, October 19.

Project 2 – Investment Management Application – 300 points – due Monday, November 23.

Capstone – Integrated Financial Analysis System – 400 points – due Thursday, December 10.

All project deadlines are 11:59 PM Eastern. This syllabus governs course points, grading, and policies. Brightspace assignment pages govern detailed specifications, required files, and submission procedures; announced changes will follow the syllabus-change policy.

In-class labs. Twenty live labs are offered at 25 points each: 10 Tuesday completion labs and 10 Thursday merit-based labs. Your best eight Tuesday scores and best eight

Thursday scores count, for 400 points total. This split ensures that neither attendance alone nor merit alone can replace the other. Project studio weeks (7 and 12) are open Q&A and consultation sessions and have no lab checkout.

The two drops in each category are an absence and recovery buffer, not replacement learning. Later sessions deliberately re-probe earlier capabilities on changed inputs; skipping one may remove that practice opportunity even when the score is ultimately dropped.

Each learner submits only for themselves through the dated individual Brightspace lab checkout quiz before leaving class. The checkout records the Lab Date (mm/dd/yyyy), teammates/learning partners, financial problem or decision, personal contribution, changed-input test, data and evidence, validation, and — only when the session produces a durable artifact — an optional repository or output link. Teammate names help reconstruct collaboration but never grant or deny attendance credit for another student. Tuesday labs earn 25 points when the authenticated Brightspace attempt is on time, contains the required work record, and includes the in-person attendance declaration and truth attestation; otherwise they earn 0. Thursday labs earn 0–25 points across problem and decision definition, data and evidence integrity, validation and robustness, financial judgment, and explanation and transfer. Reflection, confidence, effort, personality, and claimed growth or wisdom are not graded. The submitted Brightspace attempt and receipt are the authoritative checkout record. Lab checkouts are never accepted late, and no make-up lab or substitute assignment will be offered except when an equal-credit alternative is required by University policy or an approved accommodation.

Dropping a cold-run or readiness checkout from the counted lab grade does not waive the same evidence in a major project. An ungraded readiness-feedback path remains available before each project deadline; it earns no lab points and does not recreate or replace a missed checkout.

Projects. Each project delivers a locally runnable financial web application or application

component plus a professional evidence package. The same submission architecture applies to every student on Project 1, Project 2, and the Capstone: a timestamped Edition A baseline checkpoint declared before permitted project-specific AI work; an after-AI Edition B research-evolution brief; an accessible GitHub repository; a validation and AI-use record; an investment-committee memo or decision deck; and three short videos covering research evolution, technical ownership, and investment judgment. Detailed specifications, filenames, video limits, and submission procedures are published on the Brightspace assignment page.

The submitted files and setup instructions must allow the work to be run and tested on a local computer. The repository contains the runnable source, dependency file, README setup instructions, meaningful development history, and visible executed output. Never commit passwords, API keys, tokens, credentials, or private data; use environment variables and an appropriate .gitignore. DRIVER is taught as a problem-solving scaffold, but students are not graded on adherence to the framework itself. Project 1 is scaffolded; Project 2 expects greater independence; the Capstone expects professional-level integration across corporate finance and investment management.

Every project is assessed on the same six criteria: problem definition and decision usefulness (15%), data integrity and traceability (15%), financial soundness and judgment (20%), technical execution and usability (15%), validation, sensitivity, and reproducibility (25%), and professional communication (10%). The published major-project analytic rubric supplies the authoritative performance levels, descriptors, point mappings, calibration procedure, no-double-deduction examples, and visible-output cap examples. Assignment pages use copies of that one source.

What the criteria mean. Data integrity includes the correct company or security, reporting period and as-of date, source, units, currency, definitions, transformations, missing-data treatment, and reconciliation to authoritative data. Financial soundness includes correct finance principles, internally consistent assumptions, accounting and cash-flow treatment, time value of money, defensible discount rates, and economically plausible constraints. For example, a perpetual growth rate must not exceed a defensible long-run nominal growth rate for the relevant economy; no company can outgrow the economy forever.

Validation includes independent checks, known-answer comparisons, sensitivity and stress testing, edge cases, and reproducibility. Technical execution covers whether the application runs reliably and is usable. A polished application cannot compensate for materially inaccurate data or financially impossible assumptions. These criteria grade evidence in the work, not personality, confidence, or claimed transformation.

Every project submission requires: the unchanged timestamped Edition A baseline; the Edition B research-evolution brief ending with what changed and why; a reproducible GitHub repository and visible executed output; a validation and named AI-use record; a concise investment-committee memo or decision deck; and three separately titled videos with transcripts: (1) research before and after project-specific AI, with course/own/peer/AI change attribution, (2) a detailed codebase and validation walkthrough, and (3) a formal buy-side investment-committee presentation. The Brightspace assignment page specifies the duration cap and exact manifest. These artifacts provide evidence for the rubric criteria; their conformity to DRIVER is not graded separately. Work submitted without visible executed output receives at most 50% credit — the result is the deliverable, not the code alone.

Late project submissions. The first late project submission in the course may be accepted for up to four calendar days, with 20% of the earned score deducted for each day or fraction of a day late. At five days late, it earns zero. Any second late project submission automatically earns zero. Technical problems do not stop the late clock; submit early and verify the Brightspace receipt. University-approved absences and DRC accommodations are handled as required by University policy.

Grading Scale

Approximate planning ranges: A: 93-100. A-: 90-92. B+: 87-89. B: 83-86. B-: 80-82. C+: 77-79. C: 73-76. C-: 70-72. D+: 67-69. D: 63-66. D-: 60-62. F: below 60.

The percentage ranges above are planning estimates, not guaranteed or fixed cutoffs. Under Daniels School of Business undergraduate grading guidance, this course targets a mean GPA of approximately 3.0, with a target distribution of 20-25% A/A-, 60-70% B+/B/B-,

and 10-20% C+ and below. Final letter grades depend on relative performance and may be adjusted upward or downward based on class performance and the DSB grading guide. A numerical total or rounding convention alone does not guarantee a particular letter grade.

Regrade requests must be submitted in writing within seven days of a grade being released and must identify the specific rubric criterion in dispute.

Attendance Policy

Attendance is not graded separately. Twenty class meetings between August 25 and November 17 include an individual lab checkout: 10 Tuesday completion labs and 10 Thursday merit-based labs. Your best eight Tuesday scores and best eight Thursday scores count. The other ten meetings — the Project 1 and Project 2 studio weeks (Oct 6, Oct 8, Nov 10, Nov 12) and the six meetings after November 17 — are Q&A, studio, and consultation sessions with no lab checkout and no lab points.

Each learner must submit only for themselves before leaving the session through the dated Brightspace checkout, record the Lab Date (mm/dd/yyyy), declare their in-person attendance, and truthfully record their own participation, teammates/learning partners, contribution, tests, and evidence. A repository/output link is optional and appears only when the session produces a durable artifact. Being named on another student's checkout has no effect on your grade. A mismatch between records is a review flag, not an automatic attendance decision or misconduct finding. Because each lab depends on live work with classmates, there are no late lab submissions or ordinary make-up labs. The two-drop buffers in each category provide general flexibility for missed or weaker lab sessions; they are not represented as a substitute for an approved accommodation.

University-approved absences and Disability Resource Center accommodations will be handled as required by University policy, but not by recreating a past interactive lab. If an approved accommodation or official absence requires a different response, contact me promptly so I can coordinate the documented course-level response with the Office of the Dean of Students or the Disability Resource Center. That plan may change how the affected checkout is counted or provide an approved equal-credit alternative. Do not send

medical documentation to the instructional team.

Be realistic about fit. This course is built on live, in-class work, and beyond the built-in buffers there are no make-ups; sustained absence is very difficult to recover from. If your semester schedule will not allow regular Tuesday/Thursday attendance, take that seriously while the registrar's drop/add period is open — a course whose grade lives in the classroom may not be the right choice this term, and deciding early protects your GPA and your tuition. If your absences stem from circumstances the University recognizes — illness, an approved accommodation, an official absence — use the routes above with the Office of the Dean of Students or the Disability Resource Center early, and they will be handled as University policy requires.

Course Schedule

All sessions meet Tuesday and Thursday. No class Tuesday, October 13 (Fall Break) or Thursday, November 26 (Thanksgiving Break). Every class meeting is an interactive working session; this schedule lists topics and major deadlines only.

Week 1: Aug 25, Aug 27. Technology readiness, DRIVER, and company screening.

Weeks 2–4: Sep 1, Sep 3, Sep 8, Sep 10, Sep 15, Sep 17. Valuation and deal analysis.

Weeks 5–6: Sep 22, Sep 24, Sep 29, Oct 1. Pro-forma financial modeling: build and stress the five-year forecast.

Week 7: Oct 6, Oct 8. Project 1 studio — open Q&A and consultation (no lab checkout).

Week 8: Oct 15 (Fall Break Oct 12–13). Portfolio construction opens. Project 1 due

Monday, October 19.

Week 9: Oct 20, Oct 22. Portfolio construction and optimization.

Weeks 10–11: Oct 27, Oct 29, Nov 3, Nov 5. Alternative data and market analysis.

Week 12: Nov 10, Nov 12. Project 2 studio — open Q&A and consultation (no lab checkout).

Week 13: Nov 17, Nov 19. Applied decision-system studio — student-selected track. Final lab checkout Tuesday, November 17; no checkout November 19. Project 2 due Monday, November 23.

Week 14: Nov 24. Applied decision-system studio continues (no lab checkout). No class Thursday, November 26.

Week 15: Dec 1, Dec 3. Integrated capstone development (no lab checkouts).

Week 16: Dec 8, Dec 10. Capstone consultation studios (no lab checkouts). Capstone due Thursday, December 10.

Twenty meetings through November 17 include a graded lab checkout. Ten meetings run none: the project studio weeks (Oct 6, Oct 8, Nov 10, Nov 12) and the six meetings after November 17 (Nov 19, Nov 24, Dec 1, Dec 3, Dec 8, Dec 10). Tuesday labs are primarily completion based; Thursday labs are primarily merit based. Tuesday points measure the authenticated required work record, not physical presence by itself. Deadlines are

published here and in the Brightspace calendar and will not move earlier.

Academic Integrity

Purdue prohibits dishonesty in connection with any University activity. Cheating, plagiarism, and knowingly furnishing false information to the University are examples of dishonesty (Part 5, Section III-B-2-a, University Regulations).

Specific to this course:

You are responsible for every submitted claim, assumption, output, and material code path, regardless of whether AI produced it. Instructors may request a live demonstration or oral explanation to assess authorship and understanding. Inability to explain the work affects the relevant grading criteria and may prompt an academic-integrity review, but it is not by itself an automatic misconduct finding; any misconduct determination follows Purdue procedures.

Undisclosed AI use is an academic integrity violation. Disclosed AI use that contains unedited AI text or factual errors is a quality problem and is graded down, not referred – the difference is disclosure.

Collaboration is encouraged during in-class labs. Individual project submissions must be your own work; sharing project deliverables between students is not permitted. Using AI-generated video or voice impersonation, or fabricating data or results, is prohibited. Knowingly submitting a lab checkout for a session you did not attend, submitting on another student's behalf, or falsifying teammates/learning partners, contribution, the in-person attendance declaration, or evidence is also prohibited. A discrepancy is reviewed rather than treated as automatic proof of misconduct.

AI Policy

AI use is required in this course, not merely permitted. Learning to direct AI toward correct, verifiable financial analysis is the central skill being taught and assessed.

The same requirements apply to every student on every assignment:

Disclose. Every submission states which AI tools you used and for what. Name the specific tool. A vague or unnamed tool does not satisfy this requirement and receives no credit for that element.

Document. Every project includes an AI-use and validation record — key prompts, what the AI produced, and how you verified it — plus a reflection on what AI did well, where it struggled, and what you checked independently.

Validate. Every AI-produced result is a hypothesis until you test it. Check it against a known answer, check it for reasonableness, check the edge cases, and check for the failure modes specific to AI, such as fabricated sources and confidently wrong figures. This course requires two independent AI platforms partly so you can cross-examine one with the other.

Own it. You are responsible for everything you submit. AI is a collaborator, not an author, and human judgment stays central to every financial decision you present.

Nondiscrimination Statement

Purdue University is committed to maintaining a community that recognizes and values the inherent worth and dignity of every person; fosters tolerance, sensitivity, understanding, and mutual respect among its members; and encourages each individual to strive to reach his or her potential. A hyperlink to Purdue's full Nondiscrimination Policy Statement is included in the Academic Resources table on your Brightspace homepage.

Accessibility

Every member of our course should be able to access, use, and learn from the materials we share. This includes all course related digital content that you and I share in the course. This approach helps promote equal access for everyone at Purdue and is mandated federally by [Title II of the Americans with Disabilities Act \(ADA\)](#). We will work together to provide this access within our Brightspace course.

- My part, as the instructor, is to make sure all course materials shared to Brightspace, such as documents, slides, videos and audio, and images, meet accessibility guidelines and to assist you in making sure anything you share is accessible. If we can do anything further to support your access to and engagement with course materials, please notify me.
- Your role, as a student, is to make sure anything you post for other students to engage with is also accessible, such as peer grading, peer feedback, and discussion board posts. This expectation is built into all course assignments that require you to post to Brightspace.
- A good starting place for students and instructors is to bookmark and review the [Innovative Learning Accessibility Checklist](#) for guidance on creating accessible materials. We need to work together to make sure all materials on our course Brightspace are accessible.
- If you select materials to share on our Brightspace from Purdue Libraries catalog or databases, best practices include choosing items that:
 - Can be downloaded in full
 - Are available in EPUB or HTML formats
 - Include alternative text for written materials or captions for audio/visual content

Accommodations

Purdue University strives to make learning experiences accessible to all participants. If you anticipate or experience physical or academic barriers based on disability, you are encouraged to contact the Disability Resource Center at: drc@purdue.edu or by phone: 765-494-1247, as soon as possible.

If the Disability Resource Center (DRC) has determined reasonable accommodations that you would like to utilize in my class, you must release your Course Accommodation Letter to me. Instructions on sharing your Course Accommodation Letter can be found by visiting: [How To Use Your Course Accommodation Letter](#). Additionally, you are strongly encouraged to contact me as soon as possible to discuss implementation of your accommodation.

Mental Health/Wellness Statement

If you find yourself beginning to feel some stress, anxiety and/or feeling slightly overwhelmed, try [Therapy Assistance Online \(TAO\)](#), a web and app-based mental health resource available courtesy of Purdue Counseling and Psychological Services (CAPS). TAO is available to all students at any time by creating an account on the [TAO Connect](#) website, or downloading the app from the App Store or Google Play. It offers free, confidential well-being resources through a self-guided program informed by

psychotherapy research and strategies that may aid in overcoming anxiety, depression and other concerns. It provides accessible and effective resources including short videos, brief exercises, and self-reflection tools.

If you need support and information about options and resources, please contact or see the [Office of the Dean of Students](#). Call 765-494-1747. Hours of operation are M-F, 8 a.m.-5 p.m.

If you find yourself struggling to find a healthy balance between academics, social life, stress, etc., sign up for free one-on-one virtual or in-person sessions in West Lafayette with a [Purdue Wellness Coach at RecWell](#). Student coaches can help you navigate through barriers and challenges toward your goals throughout the semester. Sign up is free and can be done on BoilerConnect. Students in Indianapolis will find support services curated on the [Vice Provost for Student Life](#) website.

If you're struggling and need mental health services: Purdue University is committed to advancing the mental health and well-being of its students. If you or someone you know is feeling overwhelmed, depressed, and/or in need of mental health support, services are available. For help, such individuals should contact [Counseling and Psychological Services \(CAPS\)](#) at 765-494-6995 during and after hours, on weekends and holidays, or by going to the CAPS offices in [West Lafayette](#) or [Indianapolis](#).

Emergency Preparedness

In the event of a major campus emergency, course requirements, deadlines and grading percentages are subject to changes that may be necessitated by a revised semester calendar or other circumstances beyond the instructor's control. Relevant changes to this course will be posted onto the course website or can be obtained by contacting the instructors or TAs via email or phone. You are expected to read your @purdue.edu email on a frequent basis.

See [Purdue's Information on Emergency Preparation and Planning](#). This website covers topics such as Severe Weather Guidance, Emergency Plans, and a place to sign up for the Emergency Warning Notification System. I encourage you to download and review the [Emergency Procedures Guide](#).

The first day of class, I will review the **Emergency Preparedness plan for our specific classroom**. Please make note of items like:

- The location to where we will proceed after evacuating the building if we hear a fire alarm.
- The location of our Shelter in Place in the event of a tornado warning.
- The location of our Shelter in Place in the event of an active threat such as a shooting.

Student-Related Policies

The Vice President for Ethics & Compliance website includes a list of [Student Policies](#). Among those is the [Violent Behavior](#) policy, which explains that Purdue is committed to providing a safe and secure campus environment for members of the university community. Purdue strives to create an educational environment for students and a work environment for employees that promote educational and career goals. Violent behavior impedes such goals. Therefore, violent behavior is prohibited in or on any University facility or while participating in any university activity.

Grade Appeals Process

At the end of the course, after final course grades have been assigned, students who believe their grade was assigned contrary to what is outlined in the course syllabus, has been assigned arbitrarily, or has been reduced too severely due to a violation of course academic integrity policies, may submit an appeal request to have this final course grade reviewed. The University's Grade Appeal Process is outlined in the University Catalog and is also referenced on the website for the [Office of Student Rights and Responsibilities \(OSRR\)](#).

Staff in the OSRR office are able to assist in determining if a Grade Appeal is appropriate. Generally, students should not expect a grade appeal to be successful if there is a lack of information to support the appeal or if the student merely thinks that the assigned grade is "unfair". Students must also attempt to resolve the matter informally with the course instructor prior to beginning the appeal process.

Basic Needs Program

If you are facing challenges securing basic needs such as food, housing, transportation, health services, or access to technology or childcare resources and believe this may affect your performance in the course, please contact the Office of the Dean of Students (ODOS) to help coordinate with community resources. These services vary by location. In West

Lafayette, see the [Basic Needs Program](#) website, or email basicneeds@purdue.edu. To connect with a Student Support Generalist on the Indianapolis campus, contact them by phone at 765-495-7797 or email studentlifeindy@purdue.edu.

Course Evaluation

Toward the end of this semester, you will be provided with an opportunity to give feedback on this course and your instructor. Purdue uses an online course evaluation system, and I will not have access to this anonymous feedback until after final grades are submitted. You will receive an official email from evaluation administrators with a link to the online evaluation site and will receive a prompt to complete the survey when you login to Brightspace. The subject line will be: Please take 2-5 minutes to complete the survey. Check your "Junk E-mail" folder occasionally to be sure the evaluation emails were not accidentally routed there. Your participation is an integral part of this course, and your feedback is vital to improving education at Purdue University. I strongly urge you to participate in the evaluation system.

This syllabus is subject to change. You will be notified of any changes as far in advance as possible via an announcement on Brightspace. Monitor your Purdue email daily for updates.
