Executed valuation dashboard

Oladapo Olaniyan | Formatting review, October 6, 2026. Working values from final-working-run; finance assumptions unchanged. AI draft watch/defer; student final judgment blank.

Market date: 2026-10-05; observed price $125.65. USD millions unless per share. Bridge and diluted-share proxies retain dated limitations.

Case	EV ($M)	Equity ($M)	Value/share	TV / EV
low	144,616	104,126	$76.12	77.7%
base	200,936	160,446	$117.29	80.1%
high	273,327	232,837	$170.22	82.8%
value reset failure	111,116	70,626	$51.63	77.2%

Base forecast: linked statements

FY	Revenue	EBIT	Common NI	CFO	FCFF
2026	98,621	14,201	8,949	12,845	10,278
2027	102,073	14,903	9,462	13,429	10,731
2028	105,646	15,636	10,006	14,122	11,280
2029	108,815	16,322	10,526	14,750	11,770
2030	112,079	17,036	11,076	15,462	12,332

WACC / terminal-growth sensitivity: value per share

WACC	g = 1.5%	g = 2.0%	g = 2.5%	g = 3.0%
6.66%	$131.24	$140.60	$152.15	$166.79
7.16%	$116.98	$124.17	$132.85	$143.57
7.66%	$105.04	$110.65	$117.29	$125.32
8.16%	$94.89	$99.32	$104.48	$110.59
8.66%	$86.17	$89.68	$93.74	$98.47

42 ordinary checks passed; zero failed; five open; two qualified. Clean-run evidence exists. Arithmetic success does not establish economic assumptions or human ownership.

Mandatory remaining evidence: Edition A recovery guidance, human-authored AI-off frozen prediction and AI-closed run, real partner challenge, final student action/dispositions, recordings/transcripts, accessible repository/videos and final manifest/freeze. These are not supplied by rendering.

Project 1 continuation audit - 2026-10-06

Analyst: Oladapo Olaniyan. AI-assisted working record. Original files and all submitted lab artifacts retained.

Current official requirements

Live Brightspace Project 1 was read on 2026-10-06 at https://purdue.brightspace.com/d2l/lms/dropbox/user/folder_submit_files.d2l?db=1581848&grpid=0&isprv=0&bp=0&ou=1636012. Individual corporate-finance application, 300 points, due October 19, 2026 at 11:59 PM Eastern. Brightspace controls dates and assignment details. No submission was made.

Live October 5 announcement, “Tomorrow (Oct. 6): No Lab - Project 1 Help Session,” says bring work in progress to regular class time. It emphasizes five-year drivers, statement/base reconciliation, comps/DCF disagreement and downside cash/value/action. Announcement: https://purdue.brightspace.com/d2l/le/news/1636012/2039387/view?ou=1636012. No changed deadline appeared in this announcement. This is not a claim that every historical announcement was re-read.

The public course repository was rechecked: https://github.com/CinderZhang/FIN43900-Fall2026. Current shared architecture/checklist/manifest were downloaded into sources/; a repository tree page subsequently returned a cache error, preserved as a navigation limitation rather than evidence of an additional requirement. Local course starters were inspected before reuse. Published Project 1 brief and live assignment take priority over generic starters.

Verified finance requirements: buy-side committee has no position; define user, horizon, security, valuation date, currency/share basis/exclusions; filing-based history and transparent normalized base; company-specific five-year linked IS/BS/CF; load-bearing driver challenges; forecast-derived FCFF/WACC DCF with terminal value and complete enterprise/common-equity/share bridge; causal low/base/high scenarios; WACC/g grid and terminal share; reverse DCF/market-implied expectations; peer policy declared before selection, consistent EV and equity multiples; explain method disagreement; named downside with cash/value/action consequences; real credited fresh-eyes challenges; conditional valuation range and committee action.

Verified evidence requirements: known-answer, source/definition, direction/boundary, statement articulation, bridge and peer checks; highest-risk failure/cold run; one independently checked AI output; material AI-use record; visible executed output; immutable human AI-off changed-input prediction before design/execution with AI-closed run; research evolution; accessible repository; memo <=2 pages or deck <=8 main slides; Videos 1/2/3 <=3:00/5:00/5:00 with corrected plain-text transcripts; 12-row manifest (11 required plus optional deployment). Video 3's main delivery is a live product demonstration. Webcam/approved equivalent and stable accessible hosting are required by shared architecture. Seven conceptual parts and 12 manifest rows are distinct.

Access identity, final filename prefix, any access-cure procedure and accommodation-specific instructions were not located in the portions read. They remain verification items; no identity, prefix, permission or approved exception is invented. All working filenames are provisional.

Audit of prior Labs 03-12

Lab	Finding	Permitted reuse in this continuation
03	Submitted PDF is one-page Edge File not found; neighboring Markdown cannot establish submitted baseline content	Preserve receipt/hash; no reconstructed Edition A
04	Historical source ledger contains approximate/unclear values and assumptions	Source-navigation ideas only; replace model inputs with traced SEC lines

Lab	Finding	Permitted reuse in this continuation
05	Synthetic DCF CSVs match professor starter; known-answer training, not PEP facts	Unchanged fixtures, hashes and 12-metric test
06	Hardcoded FCFF and February 2025 price	Mechanics only; no carried valuation or current price
07	Rounded/unsupported peer figures and no-AI/verified attestations	Policy concepts only; fresh AI-drafted declared policy, no adopted personal attestations
08	DCF/comps/transaction conclusions depend on hardcoded inputs	Explain EV/equity mechanics; no precedent values or averaged target
09	ABG instructional case, FCFE basis	Training only; not PEP facts or personal baseline
10	FCFE/cost-of-equity valuation, stale price and faulty PEP historical lines	Rebuilt separate FCFF/WACC model; original retained
11	PEP stress amounts and synthetic thresholds not verified company facts/covenants	Causal stress concept only; new explicit assumed downside, no default/covenant claim
12	Project 2 manifest mechanics do not validate Project 1 finance	Checklist structure only; new Project 1 manifest remains working

Edition A evidence hold

Receipt submission 22599005: September 1, 2026, 2:30 PM, as established in the prior receipt audit provided by the student. Receipt-linked PDF and local labs/lab-03/Project_1_Edition_A_Baseline_PEP.pdf were byte-identical, but contain a one-page Edge “File not found” message. Local SHA 256 rechecked:

F745E7EA27A1445830573029A77D28967A1E4F5E53A9BA9A794079373F35464F.

The receipt establishes a submission, not recoverable report content or human authorship. No baseline report was replaced or recreated. Staff guidance is required; no instructor/TA contact was made. Research-evolution remains incomplete pending that guidance. The current working B can stand separately; every A comparison is unavailable.

Boundaries and remaining work

All new analysis/code is AI-assisted. Forecasts, beta, ERP, debt spread, terminal ROIC, action thresholds and peer policy are proposals pending Oladapo Olaniyan's judgment. No fabricated partner challenge, human attestation, video, transcript, staff guidance or completed locked test appears. Ordinary scenarios, sensitivity, reverse DCF and synthetic validation are not substitutes for the locked evidence. SEC direct-download HTTP 403 and sandbox DNS failures are preserved in retrieval logs; sources were read through the web tool instead of claiming saved originals.

Load-bearing assumptions and challenges

Analyst: Oladapo Olaniyan. Written 2026-10-06 by AI assistance; analyst acceptance pending. Values are in data/assumptions.json and data/filing-inputs.json; rates decimals, dollars/shares millions. The register separates facts, management outlook, modeling conventions and AI assumptions.

Driver / working basis	Challenge	Evidence that would change it
FY 2025 revenue 93,925; normalized EBIT 13,491 = reported 11,498 + intangible impairment 1,993	Impairment may signal real brand erosion; removing expense does not restore economics	Brand volumes/margins and impairment note support lower future earnings; leave historical GAAP intact
FY 2026 growth low/base/high 4/5/6%; base later 3.5/3.5/3/3%	Management reported 4-6% combines organic 2-4%, FX~1 pt, acquisitions~1 pt; not all recurring volume	Latest organic volume/price/FX and acquisition contribution; separate nonrecurring effects
Base gross margin 54.2->54.5%, SG&A 39.8->39.3%	Productivity benefits may fund discounting rather than expand margins	Segment volume, pricing and expense evidence; weak North American demand changes scenario
Other cases explicitly change revenue, gross margin, SG&A and working capital together	Causal links may double-count risks or overstate offsetting productivity	Trace shock through separate volume/price/unit cost/fixed cost evidence; no probability claims
Capex base/high 4.7%, low/downside 4.9% of sales	Management says <5%; cash spending is not automatically total asset additions	Cash-flow capital spending vs segment Note 1 both 4,415; acquisition/noncash PP&E reconciliation would refine forward need
Depreciation rate 3,368/29,905 of opening PP&E; amortization 83/93,925 of sales	Net PP&E denominator and asset age may bias depreciation; acquisitions/disposals are frozen	Gross PP&E/asset-life and schedule from note; explicit acquisition plan; separate maintenance/growth capex
NWC = receivables + inventory + prepaid - AP/other current liabilities	Broad AP includes nontrade liabilities; annual BS change 410 differs from cash-flow operating change 1,212	Reconcile acquisition, FX, tax/accrual and line-scope difference 802; narrower operating schedule
Receivable/prepaid/AP revenue ratios; inventory COGS ratio; extra days 0/+5/-2/+10	Extra days apply to BOTH receivables and inventory, not a single combined cash-cycle metric	Actual DSO/DIO/DPO movements and segment inventory evidence
Tax 22% normalized NOPAT and positive pretax tax	Core tax outlook is not GAAP/economic marginal tax or full deferred-tax rollforward	Geographic tax mix and cash tax/deferred tax note; tax-loss case needs separate treatment
Risk-free 5.31% Oct 5 Treasury 10-year PAR yield	Par yield proxy differs from matched-duration spot curve	Alternative dated USD curve and valuation convention
Beta 0.65, ERP 5%, debt spread 80 bp, book debt weight	AI assumptions, NOT observed estimates; rates/credit claims unverified	Dated levered beta with method/window, authoritative ERP and PEP bond yields/market debt; then recompute WACC
WACC 7.6615%, using price*point shares and debt 53,214	Historic balance debt and point shares lag valuation date	Latest filings/issuance/redemption/repurchases; qualify bridge age rather than invent rolled amounts
Terminal g low/base/high 1.5/2.5/3%, downside 1%; ROIC 15%	Persistent 15% incremental ROIC may exceed attainable returns; growth requires funded reinvestment	Sustainable return/reinvestment evidence, competitive erosion; g must stay below WACC and ROIC
Terminal NOPAT grows with g; net reinvestment=NOPAT*g/ROIC	Steady-state simplification can hide working-capital/capex composition	Separate sustainable maintenance D&A, net capex and WC; current terminal arithmetic checked but economics unapproved
Oct 5 valuation; FY 26 stub 82/365; uniform pro-rata FCFF	PEP calendar/seasonality may make remaining cash disproportionate; bridgeQ 2 is not Oct 5	Quarterly cash forecast/actuals through valuation date; reconcile calendar/52-53-week basis

Driver / working basis	Challenge	Evidence that would change it
Cash 10,251 + STI 465 + affiliate book 2,180 - debt 53,214 - NCI 172	Pension/tax/other claims and fair-value adjustments absent; entire cash excess status unverified	Excess operating cash analysis and claims notes; show adjustments without double subtracting modeled liabilities
Point shares 1,364.891558 + dilution proxy 3	Period-average incremental dilution is not exact option proceeds/point diluted count	Security-level awards, options/treasury-stock and repurchase rollforward; use basicpoint only for market capitalization
Dividends 7,900 in 2026, grow 3%; buyback 1,000 annually	Later payouts may be unaffordable; guidance not binding and buyback share reduction omitted	Actual cash returns; approve flexible payout/share schedule; dividend policy can change under stress
Minimum cash 4,000; short debt funds shortfall; principal repayments 0	Explicit refinancing assumption does not prove liquidity/credit availability; no maturity/covenant schedule	Debt maturities, credit lines, covenant terms and limits; default not inferred from synthetic ratios
Other assets/liabilities/GW/affiliate/NCI frozen, pension_other-133, no M&A/disposals/FX	Articulation can pass while economics incomplete	Material acquisitions/disposals, FX, pension or deferred-tax changes require explicit schedules
SBC remains cash-like expense; no addback or future award dilution	Simplification differs from actual cash and ownership economics	SBC award schedule; choose consistent dilution or expense treatment before final
Operating leases stay in operating costs; finance leases within reported debt	Debt scope may vary across peers; adding ROU claims while deducting lease expense would double count	Lease notes and consistent lease-adjusted EBITDA/EV or consistent operating convention
KO and MDLZ FY 25 GAAP EBIT+D&A / common NI; Oct 5 close; Q 2 bridges	KO beverage franchise asset intensity; MDLZ 1,341 derivative mark-to-market depresses FY 25; only two peers	Broader predeclared eligible set with reconciled inputs; optional normalized comparison separately, no selective median
Book affiliates/investments deducted consistently from EV; NCIbookproxy; common NI for P/E	KO affiliate income appears in NI, not EBIT; book investment value not fair value	Fair-value/source bridge and affiliate contribution; EV route isolated from PE basis
AI draft watch/defer; no current position; 12-24 month review horizon	Range wide, 80% base TV, no established margin of safety; thresholds are analyst choices	Student accepts/revises risk budget; verified evidence supports sufficient discount and low-case resilience

Real partner/fresh-eyes challenge: [blank - student must supply actual person, date, challenge and response; no invented meeting].

Project 1 peer policy - predeclared continuation

Analyst: Oladapo Olaniyan. Declared 2026-10-06 before fresh peer multiples were collected in this continuation. AI-drafted policy; analyst acceptance is pending. This does not establish that the historical Lab 07 policy was human-only.

Core candidates are publicly reported branded nonalcoholic beverages or packaged snacks with material multinational distribution and positive annual operating earnings. Beverage franchises and bottlers have different asset intensity; identify rather than hide that difference. Use KO and MDLZ as sector lenses, not perfect consolidated PEP replicas. Review KDP separately because North American concentration and transactions weaken comparability. KHC is a qualified food reference, not automatically a core peer. Exclude commodity traders, restaurants, retailers and private companies. Do not change inclusion because a multiple raises/lower PEP value. Missing source evidence means unverified/excluded from quantitative medians until reconciled, never a made-up input.

Common market date: 2026-10-05 close. USD millions; share counts in millions. Primary financial basis: FY 2025 annual GAAP EBIT, D&A and net income attributable to common shareholders. Show the lag explicitly; latest interim balance sheets supply bridge debt/cash and point shares, with dilution reconciled separately. No mixed core/GAAP medians. EV = market common equity + interest-bearing debt + NCI - cash - short-term investments. Treat operating leases as operating costs and omit lease debt consistently; finance leases included in debt where reported. Other claims/nonoperating investments require explicit reconciliation. EV/EBITDA uses GAAP EBIT + GAAP D&A; P/E uses common net income. Impairment-heavy negative/nonrepresentative earnings must be qualified, not silently adjusted. Both reported and separately normalized PEP denominators are displayed.

Continuation convention: EV additionally subtracts reported nonoperating investment balances, including equity-method affiliates; these are book proxies, not independently validated fair values. Apply the same book-proxy policy to PEP/KO/MDLZ and explicitly qualify the results. KO affiliate income is included in net income but outside operating EBIT, so EV/EBITDA and P/E have different operating scopes. No separate MDLZ STI line is treated as zero for the provisional calculation only. This does not prove all investment assets are identified.

Before final use verify security/class, fiscal period, debt/lease definition, nonoperating assets, NCI and dilution for each peer; record accession/locator/date and arithmetic. Report sector differences and method disagreement instead of averaging DCF and multiples into an unsupported target. If valid data are insufficient, preserve the shortfall and block peer conclusions.

Three-video preparation - working outline

Analyst: Oladapo Olaniyan. AI-assisted preparation 2026-10-06. These are planning indices, not recordings, measured durations, corrected transcripts or a script of personal experiences. Fill actual timestamps only after recording. Small webcam view/approved equivalent; clear audio and readable evidence; three separate descriptively titled stable unlisted/public or approved Purdue-hosted links, never private. Nothing uploaded/published here.

Video 1 maximum 3:00: lead with current research position; explain EditionA evidence/recovery honestly; show workingB and identify course/source/AI drivers; show primary-source check correcting capital-spending mismatch claim; explain your own accept/qualify/correct/reject rationale. Approximate budget:0:00-0:30 boundary/currentposition,0:30-1:20 evolution,1:20-2:30 AIcheck,2:30-2:55 owninterpretation. Actual index/URL/title/duration/student statements: blank.

Video 2 maximum 5:00: open source and output; trace filing-inputs -> assumptions -> forecast -> FCFF -> DCF -> bridge -> visible report. Explain NOPAT, working capital, debt funding and terminal reinvestment. Show ordinary known-answer/articulation/cash-corruption check and actual cold-run log. Explain source/economic limitations; do not claim locked evidence from ordinary tests. Approximate budget 0:00-0:35 map,0:35-2:35 finance/code,2:35-3:45 validation,3:45-4:50 run/risks. Actual index/URL/title/duration: blank.

Video 3 maximum 5:00, live product demonstration as main delivery: lead committee action, then navigate executed HTML and show range, date/inputs, scenario cash effects, WACC/g grid and reverseDCF/qualifiedpeerdisagreement. Defend your own evidence/conditions/reversal triggers and end with committee ask. Avoid repeating full codewalkthrough. Approximate budget 0:00-0:35 action,0:35-2:45 live evidence,2:45-4:15 risks/monitoring,4:15-4:50 committee ask. Your final judgment, actual index/URL/title/duration: blank.

After real recordings, correct material finance terms, PEP/KO/MDLZ, names, attribution and numbers against current memo/output. Create actual docs/transcript-video-1.txt, docs/transcript-video-2.txt, docs/transcript-video-3.txt; these files are intentionally not fabricated now. Record measured durations and real timestamp indices in manifest; validate instructional-team access logged out. Do not replace/edit recording after freeze/deadline.

PEP working model - Oladapo Olaniyan

FIN-43900 Project 1. This supplemental run guide leaves the original README intact. Start here for the current continuation. AI-assisted working package; no final student recommendation or submission readiness claimed.

Decision: a buy-side committee with no PEP position is considering initiate/watch-defer/do-not-initiate. Working review horizon 12-24 months; modeled fiscal 2026-2030. USD/common PEP, NASDAQ; no preferred/security valuation. Price date 2026-10-05; bridge/share dates separately disclosed. Provisional AI action watch/defer pending student review and source closure.

Reproduce offline

Python 3.11+; standard library only, no pip dependencies, credentials or network. From this project directory:

python src/model.py

Each run creates a NEW dated directory under outputs and refuses to overwrite an existing output directory. Optional explicit new destination: python src/model.py --output outputs/my-new-run. Nonzero exit if finance checks FAIL. OPEN/QUALIFIED records deliberately remain visible and do not mean submission is complete. If your shell Python is unavailable, use an installed working Python executable; the inherited course .venv was inaccessible in this session. The Codex bundled Python completed the recorded run.

Open outputs/final-working-run/visible-output.html directly for the current executed view; the accompanying Markdown/CSV/JSON expose statements, sensitivity, peer values, normalization and all checks without rerunning. Local HTML links resolve relative to the same directory. This is a static local product; no deployment needed. New output remains separate from preserved initial-run.

Optional independent cold-run replication: python src/cold_run.py. It copies only model.py, checks.py and data into a new project-local repro folder; creates a fresh no-pip environment; runs the isolated copy; compares deterministic financial CSV/JSON hashes with final-working-run; saves full stdout/stderr, exit codes/runtime and equality checks. No network or altered forecast input is involved. This is ordinary reproducibility, not the locked test.

Map and financial logic

- data/filing-inputs.json: FY 23-25 income/CF, FY 24-25 BS, Q 2 bridge/shares, dated price/rate, source metadata.

- data/assumptions.json: explicitly AI-proposed forecast/WACC/terminal/payout assumptions.

- data/peer-inputs.csv: separate qualified KO/MDLZ lenses; dates/locators/status.

- data/dcf_case.csv, dcf_expected_output.csv: unchanged professor known-answer training fixtures.

- src/model.py: normalize -> forecast -> FCFF -> WACC/DCF -> bridge -> scenarios/sensitivity/reverse/comps -> outputs.

- src/checks.py: numerical finance tests, primary reconciliation, unresolved evidence.

- docs/: audit, assumption challenges, working memo, research evolution, validation/AI use, video preparation; student-owned evidence blanks.

- sources/: downloaded public evidence and retrieval failures; SEC values browsed but original SEC HTML downloads blocked 403.

- source-register-v3.csv and data/management-outlook-ledger.csv: current line-level facts/definitions/as-of/locators versus assumptions and management guidance.

- project1-manifest-working-v2.csv:12 rows with unfinished hosting/recordings/frozen evidence explicitly pending.

Operating expenses include D&A; cash flow adds it back once. FCFF=EBIT*(1-tax)+D&A-capex-change operatingWC. Cash/debt/shareholder financing stays outside FCFF. Statements roll PP&E, intangibles, cash and

equity; debt draw funds explicit cash floor rather than plugging cash silently. WACC uses basicpoint market capitalization and bookdebtproxy. Valuation uses point shares+incremental dilutionproxy. Terminal netreinvestment=terminalNOPAT*g/ROIC; g<WACC and g<ROIC. Remaining fiscal 2026 FCFF is prorated 82/365, a disclosed seasonality approximation. DCF bridge adds cash/STI/bookaffiliateproxy and subtracts debt/NCI; other claims/fair value remain qualified.

Major limitations: unavailableEditionA report; no human locked record/run; actualpartnerreview absent; unapproved economics/beta/ERP/spread/ROIC; no quarterly/current-date bridge rollforward; full WC/acquisition/FX/lease/claim reconciliation missing; two qualified peers with bookinvestment and historicalearnings distortion; no actual videos/transcripts/hostedrepo/access/freeze. Arithmetic PASS is not factual/judgment endorsement. Read docs/validation-and-ai-use-v3.md and docs/completion-report.md before using results. Corrected working PDFs have working-v2.pdf suffixes; earlier drafts are preserved and superseded.

No original submitted file overwritten; no contact, push, publication or Brightspace submission. Final filenames/access identity must be verified before final packaging.

Project 1 continuation completion report

Oladapo Olaniyan | FIN-43900 | 2026-10-06 | Substantial working development completed; final assignment NOT complete.

Live Brightspace: individual 300-point Project 1 due October 19, 2026 at 11:59 PM Eastern. October 5 help-session announcement repeats date. Shared course architecture/checklist/manifest rechecked; source precedence and omitted access/prefix items recorded in continuation-audit.md. Nothing submitted, sent, published, deployed, committed or pushed.

Current files: outputs/final-working-run/ is active executed model output. Corrected docs/Decision-Memo-working-v2.pdf, docs/Research-Evolution-working-v2.pdf, docs/Validation-and-AI-Use-working-v2.pdf are active PDFs; source Markdown is decision-memo-working-v2.md, research-evolution-v3.md and validation-and-ai-use-v3.md. Current source register is source-register-v3.csv plus data/management-outlook-ledger.csv. Current manifest is project1-manifest-working-v2.csv. RUNME.md is the current supplemental run guide; original README and submitted files are retained.

Working valuation: low 76.12 / base 117.29 / high 170.22 USD per diluted proxy share; named Value Reset Failure 51.63. Base WACC 7.6615%, terminal g 2.5%, assumed ROIC 15%; terminalPV 80.1% ofEV. Oct 5 observed close 125.65. AI draft watch/defer; Oladapo's final action/judgment blank. These are assumptions-driven scenario values, not approved fair values or confidence intervals.

Executed evidence

42 PASS /0 FAIL /5 OPEN /2 QUALIFIED in final checks.csv. Includes reported/source and forecast statement articulation, restricted-cash/WC distinctions, FCFF financing reconciliation, known-answer 12 metrics, Decimal bridge, WACC/g direction and invalid boundaries, funded terminal growth, reverseDCF zero residual, causal downside and copied-cash-ledger corruption detection. PASS only means the named computation/evidence check passed, not blanket economic validation.

Final cold run: repro/cold-20261006T053603935700Z/cold-run-evidence.json; fresh no-pip environment with project-only source/data, exit 0/no stderr. ResultsJSON and four financial CSVs exactly match final-working-run SHA 256 s. First inaccessible inherited Python environment and retrieval/browser/PDF errors are retained. Corrected PDFs visually inspected (memo 2 pages; research 1; validation 3). Static HTML content/links checked offline; browser preview was not verified successfully.

Material corrections: rebuild Lab 10 FCFE/stale-price model as linked FCFF/WACC; reject Lab 11 unsupported PEP stress facts; fund terminal growth with g/ROIC reinvestment; correct Note 15 to Note 1 p 68 and distinguish segment 4,192 + corporate 223 = consolidated capex 4,415. Earlier output/draft files remain superseded evidence, not current recommendations. No recreated EditionA or fabricated partner/ownership evidence.

Requirement-by-requirement status

Requirement	Status / evidence
Role/user/security/date/currency/share basis	Working defined in RUNME/memo; horizon and committee action require student acceptance
Filing history / normalized base	FY 23-25 IS/CF and FY 24-25 BS; normalized impairment shown; WC/claims/normalization economics qualified
Five-year linked statements	Executed 20 scenario-year rows; statements CSV and base visible summary; simplifying frozen accounts disclosed
Company drivers/challenges	Four causal assumptions sets and assumption-challenges.md; real partner challenge absent

Requirement	Status / evidence
FCFF/WACC/EV-equity/share	Executed; bridge datedQ 2, book/claims/dilution/current-date closure pending
Low/base/high, sensitivity, terminal share	Executed; assumptions unapproved; terminal ROIC/stub seasonality open
Reverse DCF	Executed conditional EBIT-margin path +0.8469 pp; not a human locked prediction
Predeclared peers / EV and equity multiples	AI policy before fresh multiples; KO/MDLZ calculations qualified; economic comparability/fair-value closure pending
Method disagreement	Explained; no averaged target or unsupported transaction valuation
Named downside and action	Value Reset Failure runs through statements/cash funding/value; committee effect proposed, not human final judgment
Validation / known answer / clean run	Executed ordinary checks + fresh environment; source gaps explicitly remain
Locked human AI-off prediction and AI-closed run	BLANK / NOT designed / NOT executed; mandatory human-owned evidence
AI material output/disclosure	Dated named record with corrected capital-spending source claim; student dispositions blank
Visible executed output	LocalHTML/Markdown/CSVs/PDFs exist; browser product interaction remains unverified
Research evolution / EditionA	WorkingB prepared; unchanged malformedA held; baseline content unavailable; staff guidance unresolved
Memo<=2 pages / deck<=8 main	Corrected working memo 2 pages, visually checked; student judgment required
Three videos<=3/5/5 minutes	Outline only; no recordings, measured durations, URLs or actual indices
Corrected transcripts	Not fabricated; must follow actual recordings
Accessible repo / manifest / freeze	Local model runs;12-row working manifest; hosting/access identity/prefix/freeze pending

What Oladapo needs to do

1. Write/freeze the required prediction independently with AI off before designing/executing its test. Provide only snapshot location/timestamp afterward; execution must remain AI closed. The assistant did not select any input or author expected direction/decision effect.

2. Obtain instructor/TA guidance yourself concerning malformed EditionA 22599005; preserve original bytes and receipt. No replacement/reconstruction proposed.

3. Review/accept/revise finance assumptions, current-date bridge/peer conventions and final committee judgment; supply actual credited fresh-eyes challenge. Quantify a monitoring threshold/window and owner you can defend.

4. Verify missing access/prefix instructions; record three actual videos with live product demonstration and corrected transcripts. Hosting/publication/access changes remain unperformed as requested.

5. Freeze mutually consistent actual evidence/manifest/PDFs/transcripts only after remaining requirements are satisfied; submit yourself when ready.

Exact file inventory

created-files-inventory.csv lists every current Project 1 file by absolute path, SHA 256, size and status, including technical cold-run/QA files. Five preexisting root files are marked retained/no-edit; all other files were created during this continuation. No original Lab 03-12 artifact was edited. Existing untracked Lab 04/Lab 05 question PDFs shown by Git were not touched. This continuation's scripts/data/docs were iterated; original submitted/source files preserved. The EditionA hash remainsF745E7EA27A1445830573029A77D28967A1E4F5E53A9BA9A794079373F35464F.
