Working validation and AI-use record

Analyst: Oladapo Olaniyan. Interaction/access date 2026-10-06. Working source; no final frozen submission, student attestation or completed locked test.

Evidence boundary

Market date 2026-10-05 close. Annual accounts FY 2025 ended 2025-12-27; interim bridge 2026-06-13 and point shares 2026-07-02. USD millions/shares millions; USD per share. Annual comparative statements are consolidated GAAP. Normalization, forecasts and book/fair-value proxies are distinguished in the source register and assumption challenges. No post-quarter cash/debt/share rollforward is claimed. Direct SEC downloads returned 403; browsed SEC text was used and failed retrieval logs retained. Captured market/course/Treasury snapshots have hashes. No credentials required for model run.

Executed ordinary checks

outputs/final-working-run/checks.csv: 42 PASS, zero FAIL, five OPEN, two QUALIFIED. PASS means the described executable calculation ran, not that every financial assumption is verified. Historical IS/BS/cash articulation; restricted-cash distinction; 20 forecast rows; FCFF financing reconciliation; independent Decimal EV-to-equity bridges; WACC/g directional and invalid-boundary checks; zero-value case; remaining-year stub timing; 12 published synthetic known answers; terminal reinvestment arithmetic; numerical reverse DCF residual; causal downside; deliberate copied-ledger cash corruption detection. All are AI-assisted ordinary checks; none fulfills human locked evidence.

Independent source/definition checks: normalized EBIT 11,498+1,993=13,491; capex 4,415 ties CF and Note 1; cash/restricted difference 45; CFO minus capex 7,672 ties algebra after tax/nonoperating/CFO adjustments. Cash-flow operating-WC increase 1,212 vs broad BS change 410 remains 802 unresolved, not silently equated. Peer arithmetic uses common price date and annual GAAP denominators but fair value/leases/claim/share-age closure remains QUALIFIED. Independent source check means separate primary evidence, not a second AI vote.

Highest-risk failure: mechanically balanced statements could conceal cash funding errors/double-counted FCFF. Synthetic corruption of copied closing cash by 100 USDm produced a detected articulation discrepancy; source inputs and delivered forecast not changed. Forecast FCFF reconciles from CFO after after-tax financing/nonoperating effects; D&A embedded in EBIT expenses is added once to cash flow. This checks technical propagation, not economic forecasts.

Known failures preserved: original course .venv/Scripts/python.exe could not launch (“file cannot be accessed”); bundled Python used successfully. Sandbox DNS blocked initial downloads; later generic user-agent retrieval succeeded for market/course/Treasury, SEC 403 remained. Browser body capture initially timed out; fresh tab yielded full live instructions. Initial model terminal growth policy was replaced by explicit reinvestment; initial results remain in outputs/initial-run/. See cold-run evidence JSON for actual fresh-environment outcome; do not infer it from this narrative.

Material AI uses and dispositions

Tool: Codex desktop coding assistant, exposed system identity GPT-6; finer model/build/version not available, not invented. Browser automation, web search/read, local Python calculation and ReportLab artifact generation were used in the 2026-10-06 interaction. The browser/web tools retrieved sources; finance reasoning/code/drafts were AI-assisted.

Material use	Output / location	Independent check	Working disposition	Student judgment
Lab audit and instructions	continuation-audit.md	Live Brightspace, original lab files and current course architecture	Retain traceable findings; unavailableA stays unavailable	blank

Material use	Output / location	Independent check	Working disposition	Student judgment
SEC extraction/base normalization	filing-inputs.json, source-register-v3.csv	Source line arithmetic; impairment and capex notes	Arithmetic accepted by executed checks; normalization economics qualified	blank
Five-year forecast and FCFF/WACC code	model.py/checks.py	12-metric known answer, statement and cash/bridge checks	Technically runs; assumptions not approved	blank
Terminal reinvestment correction	terminalNOPAT*g/ROIC; initial vs verified outputs	Identity and monotonicity checks	Replace mechanical growth in current model; ROIC qualified	blank
Scenarios, beta/ERP/spread and peer policy	assumptions.json, peer-policy.md	Sources distinguish guidance from assumptions; qualified peer calculations	Proposed, not observed facts or human ownership	blank
Committee memo/research/video outline	docs/*working* and video-preparation.md	Outputs/date consistency; PDF size/layout review	Draft only; personal sections blank	blank
AI capital-spending mismatch implication	CF vs segment Note 1	Both primary lines 4,415	Corrected/rejected mismatch implication	blank

No fabricated no-AI attestation, personal experience, partner review, completed recording/transcript or staff guidance. This table records AI assistance rather than claiming Oladapo Olaniyan endorsed it. Final Validation-and-AI-Use.pdf must be content-equivalent to repository record at freeze.

Locked Changed-Input Record - HUMAN ONLY / BLANK

No changed input, value, direction, decision effect or test design is proposed here. Student must author and freeze the record independently, without AI assistance; execution must remain AI closed. These blank fields are incomplete evidence, not a completed prediction.

Required field	Human record
Student-authored prediction	
Exact material input	
Old value and units	
New value and units	
Expected output direction and finance reasoning	
Expected decision effect	
Timestamp and immutable commit/snapshot	
AI-closed execution evidence	
Before/after outputs	
Actual direction and decision effect	
Reconciliation / failure or no-action-change diagnosis	

Edition A recovery, human locked evidence, actual fresh-eyes challenge, student final recommendation, peer/bridge/stub/ROIC acceptance, recordings/transcripts, hosted/access-checked repository/videos and final package freeze remain incomplete. No submission/contact/push/deployment occurred.

Final continuation run and draft correction

Analyst: Oladapo Olaniyan. Final working model produced 42 PASS,0 FAIL,5 OPEN,2 QUALIFIED. Fresh no-pip environment run repro/cold-20261006T053603935700Z/cold-run-evidence.json exited 0 with no stderr and exact SHA 256 matches for results.json, statements, sensitivity, checks and peer multiples. This is executed reproducibility evidence; it does not validate the economic assumptions or satisfy the locked test.

Final primary recheck corrected the capital-spending locator from Note 15 to Note 1 p 68 and distinguishes segment 4,192 plus corporate 223 from total 4,415. Independent note inputs now feed an executable equality check against the CF line. Earlier working PDFs remain superseded; corrected-v 2 PDFs and source-register-v 3 are current. Packet UTF-8 loading failure and Poppler wrapper path failure were retained; direct bundled Poppler executable rendered the drafts. A localhost/browser preview attempt failed to attach and sandbox socket access was blocked; no successful browser interaction is claimed. Static HTML contains visible inputs/outputs, and PDF layout/text evidence is separately recorded.
